DETAILED ACTION

Status of Claims

1. Claims 1-21 are currently under examination.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-21 are rejected under the judicially created doctrine of obviousness-

type double patenting as being unpatentable over claims 1-11 of U.S. Patent No.

6,627,006 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-11 of US 6,627,006 B1 teaches a phosphate coating treatment line process that is controlled by establishing correlations between process variables and constants defining the outcome, measuring process constants during treatment, and automatically altering an process variables or process correlations in order to keep the outcome constant within the desirable range. Due to the above teaching, the scope of the independent claim 1 of US 6,627,006 B1 significantly overlaps the independent claims 1 and 12 of the instant inventions. In

Art Unit: 1742

addition, the claimed altering of variable parameters that are most closely related to the deviating outcome constant would have been obvious to one of skilled in the art in order to maintained desired coating properties such as coating weight, corrosion inhibiting and adhesion properties. Furthermore, the scope of claims 2-11 of US 6,627,006 B1 is the same as claims 2-11 and 13-21 of the instant invention.

Therefore, the claims 1-11 of US 6,627,006 B1 teaches substantially the same automatically controlled phosphating process as that of the instant invention.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

GB 2,153,854 A teaches automatic controlling of Zn ions during a phosphate conversion coating process by automatically adding replenishing Zn ions when Zn ion concentration fall below the desired range.
